DOCKETED

SEP 17 2010

DOCKETED BY

Dear Madam Chairman and Commissioners:

I am an MS rate payer, solar energy user and solar energy installer. Why are all of us in this mom allowing MS to NOT make the most effective use of the residential funds?

We should be moving more of the funds into producing more solar energy today by

1. locking the rebate rate to be \$1.60 per watt for 24 months for all application effective today's submissions. All previous submissions are the then prevailing rate (stability)
2. locking the maximum wattage at 5,000 watts (fairness)
2. providing committed reservations as received against the "available funds" with open and honest tracking by \$ and watts, not by application count (stability)
4. restoring the \$10,000,000 dollars removed from the 2009-10 fund year
5. do not remove \$10,000,000 dollars from the 2011 fund year
- (. make new builds the same as for existing rate payers – current rate; current reservation system. We have rate payers being denied, while new home builders are receiving incentives for future users, if and when sold and occupied.
3. allow a fast track reservation at the \$1.00 per watt basis but does NOT count against the current reservation

UTILITY COMPLAINT FORM

queue nor will it bump any rate payer. And only if funds are available from the total available funds

. keep residential hinds for residential rate payers

. do not allow the funds to be used for research and development

10. do not allow residential hinds to be used for churches and schools

11. do not allow for residential hinds to be used for advertising, marketing and promotion, which apparently makes APS seem like it is supporting the renewable energy initiatives while actions lead to an opposite conclusion

WF at is sad, is we are allowing APS to intentionally thwart the rate payers to achieve a greater use of today's solar energy using known technology. By forcing the "system" to wait, we are making rate payers keep paying higher electrical bills while they are being atherised to and encouraged to go solar, but not just TODAY. APS's outside report (RW Beck) shows Arizona rate payers could save \$3 billion dollars by going solar, but again not TODAY. We need transparency of the hinds collected and spent. We need to elirainate the FUD - fear, uncertainty and doubt that the rate payer faces today.

In conclusion, we all need to act together and use the renewable energy hinds TODAY. Tlw renewable initiative Goals stated BY not AT 2025. If we can get there sooner, shouldn't we?

Fred A. Coad

Rate paver. installer and solar energy enthusiast
